

**HARVEST GAIN.
MADE SIMPLE.**

Bushel Plus SmartPan Systems™

DROP

Our advanced SmartPan™ technology allows you to easily & safely drop a pan while our air separator will save valuable time for effective sample cleaning.

MEASURE

Calculate your loss quickly & conveniently through your smartphone with our industry-certified analysis.

CALIBRATE

Leverage your results and our combine tips in the app to calibrate your combine, reduce your loss, and boost your profits.

ENHANCE

Less grain on the field means more grain in the bin and more profit in your pocket.

20" SMARTPAN™ - THE MINI

Ideal for collecting samples in long stubble conditions with 30" row spacing (corn, sorghum, sunflowers, etc.) It fits between the wide stubble rows.

40" SMARTPAN™ - THE FLAGSHIP

Our most versatile DROP PAN! It fits perfectly on the back axle, the header, or the feeder house (ideal for tall crops to keep it higher away from tall stubble).

60" SMARTPAN™ - THE WIDE SETUP

For those who want to take a slightly different approach to sample collection and combine calibration. It is great for collecting a sample from the entire width of the sieves while dropping straw and chaff in a windrow.

**"If you don't measure,
you don't know what you're losing!"**
